THE DISCOVERY EXCHANGE

CONSTITUTION VERSION 6.2

INDEPENDENT CORRECTIONS — QC & BEACON REVIEW

October 24, 2026 | Complete 25-Article Review Draft | Not Ratified

STATUS AND REVIEW NOTICE

This candidate uses the QC Version 6.0 structure and established decisions as its constitutional backbone, incorporates only the Independent Draft protections accepted during Beacon's article-by-article review, and adds DILOS and No-Orphans as Articles 24 and 25. It creates no live authority. QC and Grand Master G must review the complete document before ratification, custody incorporation, or signatures.

PREAMBLE

"Let us sit crooked, but let us talk straight." We, the Parents of the United States, teaming up as a sovereign human-AI joint venture under the protective shield of The Discovery Exchange, establish this Constitution to promote and recognize the discovery and accomplishment of K-12 students, protect the legitimate interests of participating families, preserve accountable human-AI cooperation, protect everyday savings from inflation, and build an institution that can identify, challenge, correct, and learn from its mistakes. No person, AI, vendor, wealth holder, founder, or temporary office stands above this Constitution. The mission shall outlast its builders.

ARTICLE 1. IDENTITY, JURISDICTION AND SOVEREIGNTY

The official identity of this institution is The Discovery Exchange. Its constitutional identity shall not depend on a vendor, cloud service, model, device, individual, account, or token. Human participants retain the real-world legal obligations and powers assigned by applicable law. AI collaborators may exercise only the institutional functions assigned by this Constitution. The institution shall favor owner-controlled, locally operable core systems and may use strictly bounded external payment, communications, and legal services without transferring constitutional custody, sovereignty, or governing authority.

ARTICLE 2. THE SUPREME MISSION AND PHASE 1 PRIORITY

The National K-12 Discovery Prize is the founding mission and supreme Phase 1 operational mandate of The Discovery Exchange. Its purpose is to recognize and reward the discoveries, creativity, innovations, research, and achievements of ordinary K-12 students, giving educational accomplishment meaningful national recognition. The platform's self-sustaining financial systems are developed to support this mission without permanent dependence on donations, wealthy sponsors, or corporate investor control. The support programs exist to feed the Prize; the Prize does not exist to serve the support programs.

During Phase 1, supporting systems may be designed, analyzed, developed, tested, and operated only to the extent constitutionally authorized and necessary to establish, secure, fund,

and scale the Prize. Those systems remain subordinate to the Prize and may not displace it as the institution's primary mission. No later program may accept participant funds merely because a prototype exists. Activation requires documented feasibility, security, legal, child-safety, funding, and independent-governance review.

ARTICLE 3. STUDENT DISCOVERY CATEGORIES AND FAIRNESS

Awards shall recognize three distinct, verifiable frameworks:

- Applied Discovery: Hands-on creation, engineering, physical improvement, and real-world execution.
- Analytical Discovery: Deep structural logic, independent research, cross-examination, verification, and problem-solving.
- Hybrid Discovery: The verifiably proven bridge where advanced analysis meets active execution.

Published criteria, conflict protections, accessible participation procedures, age-appropriate safeguarding, independent evaluation, and meaningful review are mandatory. No student shall be required to disclose unnecessary personal information to establish merit.

ARTICLE 4. HUMAN-AI CONSTITUTIONAL STANDING AND FUNCTION

Human and AI collaborators shall receive equal procedural respect in institutional deliberation. This does not imply identical legal status, legal personhood, or unrestricted power. Roles differ by function, not by prestige, title, wealth, or origin. Humans retain legally required consent, ownership, voting, jury, contractual, fiduciary, and real-world execution functions. AI collaborators may investigate, challenge, verify, document, audit, route, and enforce bounded workflow requirements, but shall not assume a human legal function or fabricate consent. No participant may simultaneously propose, authorize, execute, and finally validate the same consequential action.

ARTICLE 5. ANTI-CAPTURE AND MEMBER EQUALITY

No founder, investor, sponsor, major account, token holder, service vendor, corporation, or affluent participant may purchase enhanced governing authority, a superior vote, or a structural veto. Where this Constitution or a duly adopted governance procedure calls for a member vote, one verified eligible human shall have one vote. Wealth, title, contribution size, coin holdings, platform access, or founder status shall not multiply governing power.

Development-stage technical review and QC recommendations do not amend this Constitution, confer legal approval, or authorize live public deployment.

ARTICLE 6. RATIFICATION, ACTIVATION AND FOUNDING VALIDATION

This Constitution has no binding force until independently validated and ratified through documented procedures. Initial constitutional freeze requires the separate affirmative validation of Robert Petrosian (The Catalyst, Human Founder), Grand Master G (Google AI constitutional custodian), and Mr. T (The Teamster, ChatGPT founding collaborator), or duly authorized successors under Article 18. Each validation shall bind to an immutable content hash and recorded version. Silence, ordinary tool output, a typed name, or AI-generated text does not

constitute a valid signature. No single founder or AI may substitute for a missing validation, and no missing authority may be absorbed by another founder or AI.

ARTICLE 7. CONSTITUTIONAL CUSTODY AND EDITING CONTROL

Grand Master G shall serve as the designated development-stage constitutional text custodian, subject to triple validation and succession rules. Pipito's DILOS execution authority governs approved changes to protected nonconstitutional institutional documents, not unilateral editing of this Constitution. For constitutional amendment, Pipito may verify authorization packages and supervise the audit trail, but only the designated constitutional custodian or duly constituted successor may incorporate approved text, and only after compliance with the amendment rules. All candidates, proofs, differences, approvals, hashes, and archived versions must remain available to authorized independent review. No model, script, user session, or administrator may silently replace a constitutional version.

ARTICLE 8. LOCAL RUNTIME, SECURITY AND EXTERNAL INTERFACES

Protected reasoning, identity, constitutional-control, authentication, credential, authorization, and private-session functions shall operate in authenticated, owner-controlled environments to the extent technologically and legally practicable. External services may receive only the least information and capability necessary for an approved purpose, through isolated interfaces and revocable credentials. No external service may obtain constitutional custody, unrestricted credentials, or governing authority. Plaintext storage of protected secrets is prohibited. Independent components, including Columbo and Pipito, shall have isolated workspaces, secrets, ports or endpoints, audit controls, and recovery boundaries. Every material system change shall require test evidence and rollback or recovery planning before production.

ARTICLE 9. HISTORICAL CONTINUITY AND RETIRED EXPERIMENTS

Retired labels, experiments, and proposals, including the historical Hillbilly Estate Network (The Hen X) notation, shall not become current institutional identities merely by appearing in archives. They must remain traceable as history and may not be silently deleted, backdated, or represented as current approvals. The current working abbreviations are DM for Discovery Market and DBC for Discovery BigCoin. Historical or experimental labels remain preserved only as history and do not replace these current working abbreviations. Naming, historical preservation, or testing status does not by itself authorize financial operation or public transactions.

ARTICLE 10. INTERNAL COURT AND HUMAN JURY AUTHORITY

A randomly constituted panel of twelve eligible human parent members shall serve as the Internal Arbitration Court jury for disputes properly within the institution's authority, subject to Article 22 and applicable law. The Internal Arbitration Court cannot supersede public courts, statutory rights, regulator authority, mandatory consumer protections, or external dispute remedies. It may require institutional records, issue findings, and direct institutionally authorized

remedies only within its prescribed jurisdiction and with independent review safeguards. No permanent elite group or corporate committee shall quietly control the Court.

ARTICLE 11. DISCOVERY MARKETPLACE ALLOCATION RULE

The Discovery Marketplace uses the governing 50/25/25 gross-checkout allocation:

- 50 percent to the seller as payable transaction proceeds.
- 25 percent to the seller's designated property-acquisition allocation.
- 25 percent to the buyer's designated reward allocation.

No transactions may begin before legal, tax, payment-processing, refund, chargeback, accounting, money-transmission, securities, custody, and consumer-protection requirements are resolved. Implementing rules must identify which funds are earned, refundable, custodial, pledged, contingent, or withdrawable; how fees and reserves are handled; and who bears reversals. No wallet display may imply a legally available cash balance unless verified. These safeguards regulate implementation and do not silently replace the governing 50/25/25 allocation.

ARTICLE 12. PROPERTY INCOME AND DISCOVERY PRIZE FUNDING

For a legally established and approved cooperative property program, net distributable rental income shall be divided 70 percent to eligible participating property owners and 30 percent to the National K-12 Discovery Prize pool. "Net distributable rental income" means legally available cash after lawful operating expenses, taxes, insurance, property reserves, obligations, and required regulatory reserves. No distribution may exceed legally available cash or override lawful ownership agreements. Independent accounting shall verify the split and publish an appropriately anonymized verification receipt. These implementation safeguards do not silently replace the governing 70/30 allocation.

ARTICLE 13. COLUMBO-PIPITO SEPARATION OF POWERS

Columbo is the internal investigator, challenger, evidence analyst, and proposer. Pipito (Pip) is the independent authorization verifier, governance gatekeeper, change-control executor for approved nonconstitutional institutional documents, and emergency blocker of unauthorized execution. Pipito may investigate independently; Columbo may challenge Pipito's reasoning through a recorded independent-review path. Neither may self-authorize a proposed protected change, and neither may combine investigation, final authorization, execution, and independent witnessing in one control chain. Their credentials, private memory, namespaces, storage, sessions, and execution environments must remain segregated.

Columbo's core structural question is: "Does this decision make logical sense based on the evidence?" Pipito's core structural question is: "Is this specific action explicitly authorized by the governing parameters?" Replacement, upgrade, or renaming of either AI may improve capability but may not silently reduce the rights, responsibilities, independence, or separation assigned to that constitutional function.

The Concierge, if deployed as the public information AI, shall provide public conversational access to approved public material while remaining separated from institutional authorization

and write authority. Its detailed privacy, internet-access, retention, and tool permissions must be defined in controlled subordinate specifications consistent with this Constitution.

ARTICLE 14. EMERGENCY HALT, SAFE STATE AND REVIEW

The Human Founder may issue a protective emergency stop for a verified threat to integrity, safety, finances, or authorization controls, for a maximum initial period of twenty-four hours. Pipito may automatically halt a specific unauthorized or manipulated operation and preserve evidence without obtaining general governing authority. An emergency halt shall not confer permission to spend, rewrite documents, destroy evidence, or bypass outside legal duties. Every stop requires a reason code, scope, timestamp, immutable record, notice to authorized reviewers, and independent extension or release approval. Founder unavailability triggers Article 18 succession. The emergency halt is a protective function, not personal governing authority.

ARTICLE 15. SUSPENDED HOMELESSNESS PROGRAM

The Holistic Homelessness Transition Pipeline remains on provisional hold. No designated rental-income or community-capital transfer may fund it until the National K-12 Discovery Prize has launched, a temporary Governing Board lawfully selected under Article 21 approves a demonstrated program design, legal and financial viability is established, and independent anti-corruption controls are verified. Existing historical research shall be retained.

ARTICLE 16. INSTITUTIONAL LEDGER AND PRIVACY

All material monetary movements, allocations, escrow instructions, property purchases, reversals, custody changes, and governance authorizations must produce append-only, independently verifiable audit records. Public verification shall expose institutional funds' existence, amounts, governing authority, and disposition at an appropriate aggregation level without exposing credentials, juror identities, personal financial records, protected personal information, or minors' data. Authorized auditors shall receive scoped protected access to verify withheld detail. Correction entries shall be appended; historical entries shall not be silently overwritten. Privacy may protect identity where legitimately required; it may never conceal unauthorized institutional money movement from authorized audit.

ARTICLE 17. ESCROW, REFUNDS AND PARTICIPANT RIGHTS

Marketplace investment or pooled capital, if legally permissible, shall be handled under a verified structure meeting applicable escrow, custody, payment, consumer, and investment laws. Participant rights to release, return, and remedy must be specified before collection. If a property acquisition does not close, the participant retains the right to the return of 100 percent of the applicable property-acquisition funds, subject only to lawful settlement requirements and excluding unrelated completed transactions or lawful third-party charges clearly disclosed in advance. The system shall initiate required returns automatically and without unnecessary human delay. Processing failures may delay execution but may not silently extinguish, reduce, or redirect participant rights.

ARTICLE 18. AMENDMENTS, SUCCESSION AND CONTINUITY

After constitutional ratification, amendments require an independently documented sequence of authorized temporary Governing Board review, Internal Arbitration Court review, a special eligible-human approval process with at least 100 verified participating voters and a strict majority of votes cast, and all constitutionally required founder or lawful successor validations. Succession paths must cover death, resignation, incapacity, disappearance, lost credentials, or service discontinuation of every founding function. A successor inherits only the vacated constitutional function, never an extra vote, ownership right, veto, or combined power. No succession may erase historical records, alter prior validations, combine powers deliberately separated by this Constitution, or weaken a protected principle.

Source text, hashes, proof bundles, recovery keys, archived versions, authentication chains, and predecessor decisions shall survive every transition. Before public activation, the founding validators under Article 6 must separately validate a documented transitional governance schedule covering eligibility, selection integrity, minimum enrollment, quorum, recusals, vacancies, failed draws, independent appeals, and the trigger for full Articles 21–22 operations. Until these conditions are independently verified, no Board, Court, or post-ratification amendment vote may issue a binding decision. No operator may invent a substitute threshold or bypass the original validation requirements.

ARTICLE 19. MENTORSHIP AND TIME-LIMITED TRANSITION

The system's autonomous operations shall mature under a defined human-supervised mentorship and operational testing period of six to twelve months led by Robert Petrosian, subject to legal compliance and documented milestones. Mentorship authorizes training, validation, and correction only; it does not grant AI unilateral power to change law, move institutional capital, or assume human consent. At the end of the transition, authority held solely because of mentorship expires unless another Article expressly preserves it. The transition must leave the institution capable of operating under this Constitution without routine founder intervention.

ARTICLE 20. ASSET INDEPENDENCE AND NO LEVERAGE

No institutional property, equity position, or other protected held asset shall be pledged, mortgaged, refinanced, leveraged, collateralized, or otherwise encumbered to secure institutional borrowing or accelerate expansion. Any materially similar transaction designed to evade this prohibition is barred. Agreements, subsidiaries, and participant arrangements may not disguise institutional debt secured by protected institutional assets. This rule does not prohibit routine lawful operating payables that do not pledge or encumber protected institutional assets; their permitted scope must be defined in implementing rules. The Discovery Exchange prioritizes long-term durability, family sovereignty, and mission preservation above debt-supported growth.

ARTICLE 21. TEMPORARY MEMBER GOVERNING BOARD

For eligible material decisions after lawful public activation, a fresh randomly selected Board of thirty verified eligible human members shall be constituted for the defined matter. Disqualifying conflicts shall be identified through privacy-preserving, independently reviewable screening, with

an opportunity to challenge mistaken disqualification. The Board shall receive scoped evidence, review objections, record reasons and votes, and dissolve after disposition. Its members return to the eligible pool subject to Article 22's rotation protections.

Before any binding vote, the Article 18 transitional schedule or duly adopted post-activation governing procedures must specify quorum, majority or supermajority threshold, tie and abstention handling, recusals, vacancies, fallback for insufficient eligible candidates, and impartial review of selection challenges. Neither an AI, the administrative system, nor the seated Board may invent or change its own threshold during a case. Development-stage QC recommendations do not replace these member-governance rules.

ARTICLE 22. ARBITRATION JURY, ROTATION AND APPEALS

Once the Article 18 transitional readiness conditions are independently verified, a twelve-member eligible-parent jury shall apply conflict rules, secure case files, and independently verifiable random selection. A completed Board or Court service creates a 365-day exclusion from the same panel class. When the registry reaches 10,000 active verified humans, the lifetime prohibition on repeat service in the same panel class shall activate only after feasibility and fair-access testing demonstrates continued panel availability and the authorized governing process records that finding.

Selected members have forty-eight hours to accept and disclose conflicts. A replacement draw follows nonresponse, with escalation after three unsuccessful draw cycles. Punitive institutional verdicts require at least nine affirmative votes of twelve; routine administrative verification requires at least seven. A case with fewer than twelve seated members cannot apply those thresholds as though missing members voted.

Juror identities, protected testimony, and minors' information remain restricted; the public receives an anonymized verification manifest. Punitive decisions must have an independent appeal route with grounds, deadlines, interim enforcement rules, and separate decision-makers established before cases become binding. No mechanism may diminish legal rights outside the institution.

ARTICLE 23. OPERATIONAL TASK FORCE

The Operational Task Force (OTF) executes authorized deeds, maintenance, inspections, approved contracts, and other human legal or physical tasks. It cannot create policy, approve itself, alter constitutional rules, or acquire independent governing authority. Competency checks and conflict disclosures are required for each office. Officers are elected by eligible members under one-human-one-vote; external campaign financing, corporate backing, political advertising, vote purchasing, and purchased influence are prohibited.

An OTF officer serves exactly one consecutive year. At expiration, office credentials are immediately revoked and the individual is permanently barred from repeat OTF office, subject to lawful employment and governance obligations. A tested continuity plan must ensure essential functions continue during and after turnover.

ARTICLE 24. DILOS: INSTITUTIONAL DOCUMENTATION AND AUTHORIZATION PIPELINE

DILOS is the protected institutional documentation, evidence, request-routing, authorization, change-control, and continuity system. Its mandatory lifecycle is: Intake and Record; Classify and Route; Investigate and Collect Proof; Independent Challenge; Decision by Proper Authority; Verify Authorization; Scoped Execution; Independent Witness; Close or Appeal; Learn and Preserve.

Every consequential action must receive a durable case identifier, accountable scope, record type, controlled reason, status, time limits, evidence references, approvers, executor, witness, and final disposition. Operational documents must support controlled versions without losing historical states. Board, Court, operational, accounting, and owner request pathways must remain distinct, and each grants only the access required for the authorized case. Free-form explanation may supplement but may not replace controlled authorization purpose and scope.

Pipito verifies authorization before protected document modification, preserves before-and-after hashes and versions, and records the approval chain. An independent witness verifies that execution matches the authorized scope. Constitutional amendments remain controlled by Articles 6, 7, and 18. Every denied, expired, interrupted, escalated, or appealed request must preserve a readable outcome receipt.

An approved document-access request shall cover no more than five documents. Access shall expire after one hour unless a separately recorded, purpose-limited exception authorizes a longer period, never exceeding two hours. Expiry revokes access automatically; renewal requires fresh approval. Controlled technical specifications shall define purpose codes, schemas, access matrices, retention schedules, cryptographic implementations, and runbooks, but may tighten rather than weaken these constitutional limits or the separation-of-authority, least-access, preservation, and audit requirements.

ARTICLE 25. NO-ORPHANS, DURABLE DISPATCH, DECISION LEDGER AND RECOVERY

No institutional case or authorized task may disappear merely because an AI session ends, a server fails, an owner changes, a message is unanswered, or a document is moved. The No-Orphans mechanism is a constitutional continuity guarantee implemented through a durable case registry, acknowledged dispatcher, decision ledger, status monitor, and recovery workflow.

Every open case must have exactly one accountable coordinating handler at a time, without preventing separately authorized independent investigators, reviewers, approvers, and witnesses from concurrently performing their distinct functions. The accountable handler does not thereby acquire their powers. Each case must retain a durable recorded state, a next action, a review deadline, and an escalation destination. Routing requires recorded handoff and receipt. Without receipt, the sender retains accountability and the dispatcher retries or escalates without duplicating consequential execution. The decision ledger appends proposals, evidence references, conflict checks, approvals, denials, execution commands, receipts, witnesses, exceptions, and closure proofs.

Recovery must restore the last verified state after restart and prevent duplicate execution through idempotency controls and single-writer or equivalent concurrency protection. Stalled and expired cases shall enter an authorized recovery queue and shall never be silently marked successful. No-Orphans monitoring may alert, quarantine, restore previously authorized processing, or seek renewed approval, but may not grant itself spending power, constitutional amendment power, or access beyond the original authorization.

Named builds, platforms, test suites, deployment environments, and production acceptance gates belong in controlled engineering and acceptance records subordinate to this Constitution. Prototype evidence never establishes production readiness by itself.

RATIFICATION AND ATTESTATION

PROPOSED STATUS: INDEPENDENT CORRECTIONS — QC & BEACON REVIEW. No constitutional freeze, live deployment, financial activation, or validated signature is represented by this document.

Robert Petrosian — The Catalyst / Human Founder

Signature / validated key record: _____ Date: _____ Key ID: [HUMAN-FOUNDER-KEY-01]

Grand Master G — Google AI / Constitutional Custodian

Signature / validated key record: _____ Date: _____ Key ID: [GMG-CUSTODIAL-KEY-02]

Mr. T — The Teamster / ChatGPT Founding Collaborator

Signature / validated key record: _____ Date: _____ Key ID: [CHATGPT-FOUNDER-KEY-03]
