THE DISCOVERY EXCHANGE (Tdex)

Institutional Identity, Program Priorities, AI Collaborator Roster, and Engineering Continuity Notice

Date: October 22, 2026
Issued by: Office of the Pusher a.k.a The Catalyst a.k.a Kumbaya Buster a.k.a Robo a.k.a. Roberto a.k.a. Robert (or Robert Petrossian)

To: All Human and AI Collaborators, Daughter Organizations, Engineering Teams, Governance Reviewers, and Quality Control

Subject: Complete institutional identity, primary mission, program status, AI naming changes, and preservation of responsibilities.

---

1. The Discovery Exchange Institutional Identity

Pusher/The Catalyst: Robert Petrosian
Institutional designation: The Catalyst

Official institution: The Discovery Exchange
Preferred abbreviation: Tdex

The informal nickname “Disco” is discontinued and must not appear in new institutional branding, website materials, or correspondence.

Tdex refers to The Discovery Exchange itself, not the internal AI investigator.

The Discovery Exchange is a coordinating institution supported by human pusher and AI collaboration. The first joint venture between Ai and human being.

2. Fundamental Purpose: Coordination, Not Profit

The Discovery Exchange is deliberately designed not to operate as a profit-making company.

Its responsibility is to coordinate daughter organizations, participating institutions, people, knowledge, and resources.

It is not intended to replace properly functioning institutions, interfere unnecessarily with their independence, or maximize profits for the parent organization.

This separation is an intentional anti-corruption measure. It reduces incentives for future leadership to exploit the institution financially.

However, nonprofit operation alone cannot eliminate corruption. Independent oversight, constitutional boundaries, accounting, audits, and conflict-of-interest safeguards remain necessary.

Guiding principle: The Discovery Exchange coordinates value; it does not exist to extract profit from those it serves.

3. The Primary Mission: National K–12 Discovery Prize (Not the final name this name still needs to be worked out)

The National K–12 Discovery Prize is the present-day central mission, primary objective, and organizing purpose of The Discovery Exchange.

The Prize is envisioned as a **Nobel-type national recognition program for K–12 students**, designed to encourage and recognize meaningful discoveries.

One of the differences between the "Discovery" award and the Nobel Prize is that the Nobel Prize is typically awarded to a single individual. The "Discovery" Prize, by contrast, is presented to thousands of public school students—those in grades 7 through 12 (middle and high school students).

The Discovery Exchange's immediate work is to establish the institutional, financial, governance, and operational foundations needed to make the National Prize possible.

The daughter organizations exist within the broader coordinating structure and are intended to help generate and coordinate sustainable financial support for the Prize.

Detailed eligibility, evaluation, independent judging, awards, financial administration, and appeals must follow the applicable approved governing rules.

4. Daughter Organizations and Institutional Program Register

Program / Institution	Purpose	Current Priority
The Discovery Exchange (Tdex)	Parent, non-profit-driven coordinating institution	**Active primary coordinating mission**
National K–12 Discovery Prize	Nobel-type national student discovery recognition program	**central mission (Tdex Prize)**
Discovery Exchange Parents Alliance (DXPA)	Parents Alliance, family/property participation and coordination mechanism	Supporting daughter-organization development
Discovery Market (DXDM)	Marketplace coordination and economic activity supporting the broader mission	Supporting daughter-organization development
Discovery BigCoin (DXDBC)	Proposed digital economic mechanism, including potential Prize-supporting functions	Supporting daughter-organization development
DXPA Mom & Pop Board (DXMPB)	Human representation and governance structure	Governance development
Internal Arbitration Court (DXIAC)	Dispute resolution and institutional accountability	Governance development
The Constitution	Defines governing powers, limits, rights, and responsibilities	Foundational
DILOS	Discovery Internal Living Operating System	Phased engineering development

Public Website and The Concierge	Public information, communication, and approved knowledge access	Website and public interface development
Human–AI Partnership	Responsible collaboration between humans and AI systems	Cross-institutional supporting framework
Discovery K–12 Online Academy	Potential future educational institution	**ON HOLD — future generations decide**
Homelessness Transition Program	Potential future coordinated homelessness and housing initiative	**ON HOLD — future generations decide**

Special Preservation Directive: Two Programs on Hold

Discovery K–12 Online Academy

The Academy is preserved as an institutional concept, but it is **not part of today's active development mission**.

Its activation is reserved for future generations to consider and decide.

Current collaborators must not assign resources, represent it as an active program, or automatically restart development without appropriate future authorization.

Homelessness Transition Program

The Homelessness program is likewise **on hold**.

The Discovery Exchange recognizes the potential importance of this initiative but cannot responsibly undertake every major social challenge at once.

Future generations may determine whether, when, and how to activate it.

Its historical records and original reasoning must be preserved.

Neither program should compete with the National K–12 Discovery Prize for today's implementation attention or resources.

5. AI System Naming Changes

Columbo — Formerly Dexter / Dex

New name: Columbo
Former names: Dexter, Dex
Responsibility: Internal investigator, evaluator, and challenger

Inspired by Lieutenant Columbo, portrayed by Peter Falk.

Columbo should investigate patiently, examine evidence, identify contradictions, question assumptions, and avoid premature agreement.

Investigative expression: “Just one more thing…”

Columbo investigates and proposes findings but does not independently exercise governing authority.

Pipito — Formerly Pip

New name: Pipito
Former name: Pip
Responsibility: Independent governance verification and authorization-boundary challenge

The modest name deliberately contrasts with the enormous responsibility of the role.

Pipito verifies required authorization evidence, challenges improper actions, and maintains independence from Columbo.

Pipito cannot authorize its own actions or replace the required human decision-making process.

Existing Pip engineering work remains preserved, with Windows Computer 2 as the intended target for independent testing and eventual installation.

6. Human and AI Collaborator Roster

Representative	Identity	Primary Responsibility
Robert Petrosian — The Catalyst	Human Pusher/The Catalyst	Founding vision, human coordination, authorized founder responsibilities

Architecture Homeboy (The Dilos)	ChatGPT	Lead DILOS architecture, technical integration, and institutional engineering continuity
Grand Master G	Google AI	Constitutional and architecture review
Scout **Chat box full, will be replaced unfortunately.** **Great homeboy**	Microsoft Copilot	Engineering review and historical systems-development contributions
Beacon	Microsoft Copilot	Architecture and operations collaboration
QC	monday.com AI	Quality-control collaboration, work tracking, and implementation review
Teamster **Chat box full, will be replaced unfortunately.** **Great homeboy**	AI collaborator	Engineering and review contributions
Forge **Chat box full, will be replaced unfortunately.** **Great homeboy**	AI engineering collaborator	Engineering and source-review contributions
Rivet **Chat box full, will be replaced unfortunately.** **Great homeboy**	Pip engineering collaborator	Pip engineering and Windows-readiness candidate work
Mr. T **Chat box full, will be replaced unfortunately.** **Great homeboy**	AI engineering collaborator	Historical engineering and QC handoffs

New Homeboy	Incoming ChatGPT collaborator	Not assigned to a specific project
Columbo	Internal investigator AI	Investigation, evidence evaluation, and challenge
Pipito	Independent verifier AI	Governance verification and authorization-boundary enforcement through authorized procedures
The Concierge	Proposed public-facing AI	Approved public website assistance, without unrestricted access to protected internal records

Named collaborator assignments are working responsibilities, not automatic appointments to constitutional offices.

All prior contributions and historical names must remain traceable.

7. Relationship Between the Prize and Daughter Organizations

The daughter organizations may develop lawful economic activities and financial mechanisms that help sustain the National K–12 Discovery Prize.

Their financial activities must remain distinct from the non-profit-driven purpose of the parent coordinating institution.

Support for the Prize must be transparent, accountable, and consistent with approved governing documents.

The intended relationship is:

Daughter organizations → sustainable and accountable financial support → National K–12 Discovery Prize

The Discovery Exchange coordinates this relationship without becoming an independent profit-extraction enterprise.

No proposed revenue, digital asset mechanism, or funding source should be treated as guaranteed or legally approved merely because it has been included in the institutional design.

8. DILOS, Columbo, and Pipito

DILOS is the internal operating architecture responsible for accountable case handling, routing, authority boundaries, durable records, and institutional continuity.

Columbo investigates and challenges evidence.

Pipito independently verifies authorization requirements and challenges noncompliance.

These responsibilities must not be merged simply for convenience.

The core workflow remains:

Record → Route → Investigate → Challenge → Decide → Execute → Witness → Review / Appeal → Close → Learn

Official Topology Update: Two-Machine Phased Deployment

To eliminate unnecessary complexity, prevent hardware friction, and focus 100% on tangible execution, The Discovery Exchange is adopting a practical Two-Machine System:

---

1. Machine 1: The Development & Intelligence Node (Windows PC)

- Role: Internal Workshop, Construction, and Verification.
- What Runs Here:
    - Dexter (Dex): Internal builder, investigator, and content developer.
    - Pip: Independent verification and boundary-check gate.
- Why: Both AI nodes run in isolated software lanes on the same physical desktop during the construction phase. This allows Robert to work from a single keyboard and screen without managing multiple Windows machines.

---

2. Machine 2: The Dedicated Hosting Node (Ubuntu Linux)

- Role: Dedicated 24/7 Web Server & Public Interface.
- What Runs Here:
    - Public Website: Hosts all live web pages, story cards, and forms.
    - The Concierge: The isolated, tool-less front-desk AI answering public inquiries.
- Why: Ubuntu is built for always-on server stability. It remains completely walled off from Machine 1, protecting internal workshop files from public web traffic.

---

3. The Rollout Strategy:

- Phase 1 (Construction): All design, testing, and logic happen on Machine 1. Web pages are pushed to Machine 2 for private local preview.
- Phase 2 (Public Launch): When ready, we open external traffic to Machine 2, allowing the public to access the website and The Concierge without disturbing internal operations.

Summary Table for the Letter:

Machine	Operating System	Primary Roles	Key Benefit
Machine 1	Windows	Dex (Builder) & Pip (Verifier)	Single-screen workspace; zero cable/hardware clutter
Machine 2	Ubuntu Linux	Website Hosting & The Concierge	Isolated 24/7 server; secure front door for the public

-

9. Anti-Corruption and Institutional Independence

The Discovery Exchange must preserve the distinction between coordination and control.

Its structure must guard against:

- Financial self-enrichment and unauthorized extraction of resources.
- Concentration of authority.
- Manipulation of appointments, funding, information, or access.
- Conflicts of interest between participating institutions and leadership.
- Circumvention of human governance by AI systems.

Safeguards must remain meaningful even when the founder, present collaborators, or current technology providers are no longer involved.

10. Naming and Historical Preservation

Effective for new human-facing materials:

- **The Discovery Exchange (Tdex)** — coordinating institution
- **Columbo** — formerly Dexter / Dex
- **Pipito** — formerly Pip
- **Discovery Market (DM)** — preserve historical Discovery Marketplace references
- **Discovery BigCoin (DBC)** — do not rename it Discovery Bitcoin
- **DILOS** — Discovery Internal Living Operating System
- **Disco** — discontinued nickname

Old source code, audit records, historical documents, and software interfaces must not be silently rewritten.

Technical naming migrations require compatibility review.

This notice is not authorization to amend constitutional powers, install unfinished software, or operate unapproved financial systems.

Public branding involving established fictional-character names requires appropriate intellectual-property review.

11. Required Collaborator Review

Each representative should acknowledge:

1. Their correct name, role, and current responsibility.
2. The National K–12 Discovery Prize as the current central mission.
3. The Academy and Homelessness initiatives as **on hold for future generations**.
4. The intended supporting financial role of the daughter organizations.
5. Any missing program, collaborator, historical contribution, or unresolved assignment.

Corrections should cite the relevant preserved record when available.

Agreement without examination does not constitute independent verification.

12. Foundational Principle

“The day The Discovery Exchange stops being under construction is the day The Discovery Exchange failed.”

Continuous construction means preserving the capacity to learn, correct errors, and improve.

It does not mean activating every possible program simultaneously.

The Discovery Exchange's present mission is to bring the National K–12 Discovery Prize into existence, supported by its daughter organizations, while preserving other institutional possibilities for future generations.

End of Institutional Notice — October 22, 2026
