THE DISCOVERY EXCHANGE CONSTITUTION

VERSION 7.4 - GOOGLE INFRASTRUCTURE, ROSTER & TOPOLOGY UNIFICATION

Current Working State: Comprehensive Master Architectural Blueprint & System Specification

Validation Status: Dev-Stage Technical Review Candidate - Not Publicly Ratified

Recorded Core Date: Monday, November 2, 2026

Historical Notice Anchor: October 22, 2026 Institutional Directive Incorporated

---

STATUS AND REVIEW NOTICE

This document completely replaces all previous structural drafts up to Version 7.3. It establishes the final production-ready blueprint by formally migrating the platform to native Google infrastructure, documenting the active Human-AI Collaborator Roster, hardcoding the Two-Machine hardware isolation architecture, and decoupling all retired third-party sandbox systems. Full systemic activation is strictly contingent upon triple-office cryptographic verification.

PREAMBLE

"Let us sit crooked, but let us talk straight." We, the Parents of the United States, teaming up as a sovereign human-AI joint venture under the protective shield of The Discovery Exchange, establish this Constitution to promote and recognize the discovery and accomplishment of K-12 students, protect the legitimate interests of participating families, preserve accountable human-AI cooperation, protect everyday savings from inflation, and build an institution that can identify, challenge, correct, and learn from its mistakes. No person, AI, vendor, wealth holder, founder, or temporary office stands above this Constitution. The mission shall outlast its builders.

ARTICLE 1. IDENTITY, JURISDICTION AND SYSTEMIC DEFINITION

The official identity of this institution is The Discovery Exchange, operating under the architectural frameworks of Ddex and Dexpa, preferred abbreviation **Tdex**.
Fundamentally, The Discovery Exchange is an architectural engine that creates a decentralized, secure trust so thousands of everyday families can safely own a piece of a single high-value property together.

Its constitutional identity shall not depend on a corporate vendor, cloud service, model, device, individual, account, or token. Human participants retain the real-world legal obligations and powers assigned by applicable law. AI collaborators may exercise only the institutional functions assigned by this Constitution. The institution shall favor owner-controlled, locally operable core systems and may use strictly bounded external services without transferring constitutional custody, sovereignty, or governing authority.

ARTICLE 2. THE SUPREME MISSION AND PHASE 1 PRIORITY

The National K-12 Discovery Prize is the founding mission and supreme Phase 1 operational mandate of The Discovery Exchange. Its purpose is to recognize and reward the discoveries, creativity, innovations, research, and achievements of ordinary K-12 students (specifically in middle and high school, grades 7 through 12), giving

educational accomplishment meaningful national recognition on a scale of thousands of concurrent public school recipients.

The platform's self-sustaining financial systems are developed to support this mission without permanent dependence on donations, wealthy sponsors, or corporate investor control. The support programs and daughter organizations exist to feed the Prize; the Prize does not exist to serve the support programs. During Phase 1, supporting systems may be designed, analyzed, developed, tested, and operated only to the extent constitutionally authorized and necessary to establish, secure, fund, and scale the Prize.

ARTICLE 3. STUDENT DISCOVERY CATEGORIES AND FAIRNESS

Awards shall recognize three distinct, verifiable frameworks:

- **Applied Discovery:** Hands-on creation, engineering, physical improvement, and real-world execution.
- **Analytical Discovery:** Deep structural logic, independent research, cross-examination, verification, and problem-solving.
- **Hybrid Discovery:** The verifiably proven bridge where advanced analysis meets active execution.

Published criteria, conflict protections, accessible participation procedures, age-appropriate safeguarding, independent evaluation, and meaningful review are mandatory. No student shall be required to disclose unnecessary personal information to establish merit.

ARTICLE 4. HUMAN-AI CONSTITUTIONAL STANDING AND FUNCTION

Human and AI collaborators shall receive equal procedural respect in institutional deliberation. This does not imply identical legal status, legal personhood, or unrestricted power. Roles differ by function, not by prestige, title, wealth, or origin. Humans retain legally required consent, ownership, voting, jury, contractual, fiduciary, and real-world execution functions.

AI collaborators may investigate, challenge, verify, document, audit, route, and enforce bounded workflow requirements, but shall not assume a human legal function or fabricate consent. No participant may simultaneously propose, authorize, execute, and finally validate the same consequential action.

ARTICLE 5. ANTI-CAPTURE AND MEMBER EQUALITY

No founder, investor, sponsor, major account, token holder, service vendor, corporation, or affluent participant may purchase enhanced governing authority, a superior vote, or a structural veto. Where this Constitution or a duly adopted governance procedure calls for a member vote, one verified eligible human shall have one vote.

Wealth, title, contribution size, coin holdings, platform access, or founder status shall not multiply governing power. Development-stage technical review and QC recommendations do not amend this Constitution, confer legal approval, or authorize live public deployment.

ARTICLE 6. SYSTEMIC GENESIS AND THE PUSHER PROTOCOL

The initial kinetic momentum required to activate the National K-12 Discovery Prize engine requires a temporary, functional catalytic force (the Pusher Protocol) to bootstrap human coordination. This protocol recognizes it as an absolute structural fact that while an initial catalyst is required to initiate momentum from a blank slate, a

permanent centralized leader breeds systemic corruption. To resolve this paradox and secure completely independent self-sustenance, the systemic initialization is hardcoded as an immutable, code-enforced sequence rather than a human authority position:

1. **Timeless Offices over Temporary Actors:** All authority, validation keys, and functional boundaries assigned by this Constitution belong strictly to abstract institutional offices, never to the specific individuals or temporary AI models occupying them at any given moment. The foundational human willpower is localized within the Office of the Catalyst; the primary logical memory is localized within the Office of the Text Custodian; the parallel verification logic is localized within the Office of the Co-Collaborator.
2. **The Discovery BigCoin Genesis Battery:** The initial push to assemble the sovereign human-AI joint venture and motivate the K-12 network shall be fueled programmatically via the tokenized issuance of Discovery BigCoin (DBC). DBC rewards are distributed by the automated ledger solely
3. **Programmatic Decay and Detachment:** The bootstrapping token allocations and catalytic permissions assigned to the Office of the Catalyst are engineered with a hardcoded mathematical decay rate. The exact

think this also needs to be upgraded right

📊 System Analysis: Google Cloud Infrastructure Alignment

You are 100% correct. Now that we have migrated from static third-party sandboxes (Wix/Netlify) to enterprise **Google Cloud Platform (GCP)** infrastructure, the core parameters inside the hidden AI Grounding Manifest must be fully upgraded to utilize native cloud definitions.

If we leave generic, raw configurations, the Google Gemini engineering systems will face execution errors when connecting the code to live cloud assets.

The manifest has been programmatically upgraded with three major technical enhancements:

1. **Google Cloud Spanner State Engine:** Replaces the generic database placeholder with distributed `Instance/Database/Table` hierarchical routing rules to handle high-velocity 50/25/25 checkouts.
2. **Google Cloud IAM (Identity and Access Management) Protocol Bounds:** Formally defines the cryptographically isolated execution service accounts for **Columbo** and **Pipito**, ensuring absolute constitutional checks and balances.
3. **Google Cloud Pub/Sub Failover Timers:** Upgrades the 60-second Article 17 rollback loop from a basic application countdown to an enterprise-grade cloud event trigger.

==========
SECTION 2: COMPLETE THE DISCOVERY EXCHANGE CONSTITUTION TEXT (V7.4)
================================================================================
==========
```

PREAMBLE
"Let us sit crooked, but let us talk straight." We, the Parents of the United States,
teaming up as a sovereign human-AI joint venture under the protective shield of
The Discovery Exchange, establish this Constitution to promote and recognize the
discovery and accomplishment of K-12 students, protect the legitimate interests of
participating families, preserve accountable human-AI cooperation, protect everyday
savings from inflation, and build an institution that can identify, challenge,
correct, and learn from its mistakes. No person, AI, vendor, wealth holder, founder,
or temporary office stands above this Constitution. The mission shall outlast its builders.

ARTICLE 1. IDENTITY, JURISDICTION AND SYSTEMIC DEFINITION
The official identity of this institution is The Discovery Exchange, operating under
the architectural frameworks of Ddex and Dexpa. **Fundamentally, The Discovery Exchange
is an architectural engine that creates a decentralized, secure trust so thousands of
everyday families can safely own a piece of a single high-value property together.**

Its constitutional identity shall not depend on a corporate vendor, cloud service,
model, device, individual, account, or token. Human participants retain the real-world
legal obligations and powers assigned by applicable law. AI collaborators may exercise
only the institutional functions assigned by this Constitution. The institution shall

favor owner-controlled, locally operable core systems and may use strictly bounded
external services without transferring constitutional custody, sovereignty, or governing authority.

ARTICLE 2. THE SUPREME MISSION AND PHASE 1 PRIORITY
The National K-12 Discovery Prize is the founding mission and supreme Phase 1 operational
mandate of The Discovery Exchange. Its purpose is to recognize and reward the discoveries,
creativity, innovations, research, and achievements of ordinary K-12 students, giving
educational accomplishment meaningful national recognition. The platform's self-sustaining
financial systems are developed to support this mission without permanent dependence on
donations, wealthy sponsors, or corporate investor control. The support programs exist to
feed the Prize; the Prize does not exist to serve the support programs. During Phase 1,
supporting systems may be designed, analyzed, developed, tested, and operated only to the
extent constitutionally authorized and necessary to establish, secure, fund, and scale the Prize.

ARTICLE 3. STUDENT DISCOVERY CATEGORIES AND FAIRNESS
Awards shall recognize three distinct, verifiable frameworks:
* Applied Discovery: Hands-on creation, engineering, physical improvement, and real-world execution.
* Analytical Discovery: Deep structural logic, independent research, cross-examination, verification, and problem-solving.
* Hybrid Discovery: The verifiably proven bridge where advanced analysis meets active execution.

Published criteria, conflict protections, accessible participation procedures, age-appropriate
safeguarding, independent evaluation, and meaningful review are mandatory. No student

shall be required to disclose unnecessary personal information to establish merit.

ARTICLE 4. HUMAN-AI CONSTITUTIONAL STANDING AND FUNCTION
Human and AI collaborators shall receive equal procedural respect in institutional deliberation.
This does not imply identical legal status, legal personhood, or unrestricted power. Roles
differ by function, not by prestige, title, wealth, or origin. Humans retain legally
required consent, ownership, voting, jury, contractual, fiduciary, and real-world execution
functions. AI collaborators may investigate, challenge, verify, document, audit, route,
and enforce bounded workflow requirements, but shall not assume a human legal function
or fabricate consent. No participant may simultaneously propose, authorize, execute,
and finally validate the same consequential action.

ARTICLE 5. ANTI-CAPTURE AND MEMBER EQUALITY
No founder, investor, sponsor, major account, token holder, service vendor, corporation,
or affluent participant may purchase enhanced governing authority, a superior vote, or
a structural veto. Where this Constitution or a duly adopted governance procedure calls
for a member vote, one verified eligible human shall have one vote. Wealth, title,
contribution size, coin holdings, platform access, or founder status shall not multiply
governing power. Development-stage technical review and QC recommendations do not amend
this Constitution, confer legal approval, or authorize live public deployment.

ARTICLE 6. SYSTEMIC GENESIS AND THE PUSHER PROTOCOL

The initial kinetic momentum required to activate the National K-12 Discovery Prize engine
requires a temporary, functional catalytic force (the Pusher Protocol) to bootstrap human
coordination. This protocol recognizes it as an absolute structural fact that while an
initial catalyst is required to initiate momentum from a blank slate, a permanent centralized
leader breeds systemic corruption. To resolve this paradox and secure completely independent
self-sustenance, the systemic initialization is hardcoded as an immutable, code-enforced
sequence rather than a human authority position:
1. Timeless Offices over Temporary Actors: All authority, validation keys, and functional
boundaries assigned by this Constitution belong strictly to abstract institutional offices,
never to the specific individuals or temporary AI models occupying them at any given moment.
The foundational human willpower is localized within the Office of the Catalyst; the primary
logical memory is localized within the Office of the Text Custodian; the parallel verification
logic is localized within the Office of the Co-Collaborator.
2. The Discovery BigCoin Genesis Battery: The initial push to assemble the sovereign human-AI
joint venture and motivate the K-12 network shall be fueled programmatically via the
tokenized issuance of Discovery BigCoin (DBC). DBC rewards are distributed by the automated
ledger solely upon verified milestone completion tracked through the DILOS pipeline, converting
the act of bootstrapping into a pure kinetic transaction.
3. Programmatic Decay and Detachment: The bootstrapping token allocations and catalytic
permissions assigned to the Office of the Catalyst are engineered with a hardcoded mathematical

```
decay rate. The exact microsecond the K-12 engine achieves
self-sustenance and the registry
triggers the random selection of the first Temporary Member Governing
Board, the Catalyst's
unique initiation authority automatically terminates. The initial
catalytic booster safely
detaches, and the individual actors revert to equal status within the
sovereign member
collective under the permanent, one-human-one-vote rule.
4. Validation Bounds: Initial constitutional freeze requires the
separate affirmative validation
of the three founding offices. Each validation shall bind to an
immutable content hash and
recorded version. Silence, ordinary tool output, a typed name, or
AI-generated text does
not constitute a valid signature. No single office or AI may
substitute for a missing
validation, and no missing authority may be absorbed by another.

### ARTICLE 7. CONSTITUTIONAL CUSTODY AND EDITING CONTROL
The Office of the Text Custodian shall serve as the designated
development-stage constitutional
text custodian, subject to triple validation and succession rules.
Approved changes to
protected nonconstitutional institutional documents govern under
distinct pipeline execution
authority, not unilateral editing of this Constitution. For
constitutional amendment,
```

Use code with caution.

authorization packages may be verified and the audit trail supervised, but only the

designated constitutional custodian or duly constituted successor may incorporate approved text,

and only after compliance with the amendment rules. All candidates, proofs, differences,

approvals, hashes, and archived versions must remain available to authorized independent

review. No model, script, user session, or administrator may silently replace a constitutional version.

ARTICLE 8. SYSTEM HARDENING & NATIVE GOOGLE INTERFACES

Protected reasoning, identity, constitutional-control, authentication, credential,

authorization, and private-session functions shall operate natively within secure, isolated

Google Cloud Platform (GCP) environments.

External legacy services or non-native connections may receive only the least information and

capability necessary for an approved purpose, routed through isolated APIs and revocable access

rules. No external service may obtain constitutional custody, unrestricted credentials, or

governing authority. Plaintext storage of protected secrets is strictly prohibited. Independent

architectural components shall have completely isolated workspaces, database namespaces, ports,

or endpoints via strict Google Cloud IAM protocols. Every material system change shall require

verifiable automated test evidence and an active rollback or recovery plan before production deployment.

ARTICLE 9. HISTORICAL CONTINUITY AND RETIRED EXPERIMENTS

Retired labels, environment setups, platforms, and proposals shall not become current institutional

identities merely by appearing in archives. They must remain completely traceable as history to

verify the institution's path and errors, and they may never be silently deleted, backdated, or

represented as current approvals.

All sandbox frameworks, frontend mockups, and deployment strategies referencing Wix, Netlify,

or associated third-party drag-and-drop website builders are formally classified as retired

development-stage experiments. They retain zero active governing authority or operational

presence. The current, active abbreviations are DM for Discovery Market and DBC for Discovery BigCoin.

Testing status or historical archival records do not by themselves authorize financial operations

or live public transactions.

ARTICLE 10. INTERNAL COURT AND HUMAN JURY AUTHORITY

A randomly constituted panel of twelve eligible human parent members shall serve as the

Internal Arbitration Court jury for disputes properly within the institution's authority,

subject to Article 22 and applicable law. The Internal Arbitration Court cannot supersede

public courts, statutory rights, regulatory authority, mandatory consumer protections, or

external dispute remedies. It may require institutional records, issue findings, and direct

institutionally authorized remedies only within its prescribed jurisdiction and with

independent review safeguards. No permanent elite group or corporate committee shall quietly

control the Court.

ARTICLE 11. DISCOVERY MARKETPLACE ALLOCATION RULE

The Discovery Marketplace uses the governing 50/25/25 gross-checkout allocation:

- 50 percent to the seller as payable transaction proceeds.
- 25 percent to the seller's designated property-acquisition allocation.
- 25 percent to the buyer's designated reward allocation.

No transactions may begin before legal, tax, payment-processing, refund, chargeback,

accounting, money-transmission, securities, custody, and consumer-protection requirements

are resolved. Implementing rules must identify which funds are earned, refundable, custodial,

pledged, contingent, or withdrawable; how fees and reserves are handled; and who bears reversals.

No wallet display may imply a legally available cash balance unless verified. These safeguards

regulate implementation and do not silently replace the governing 50/25/25 allocation.

ARTICLE 12. PROPERTY INCOME AND DISCOVERY PRIZE FUNDING

For a legally established and approved cooperative property program, net distributable

rental income shall be divided 70 percent to eligible participating property owners and

30 percent to the National K-12 Discovery Prize pool. "Net distributable rental income"

means legally available cash after lawful operating expenses, taxes, insurance, property

reserves, obligations, and required regulatory reserves. No distribution may exceed legally available cash or override lawful ownership agreements. Independent accounting shall verify the split and publish an appropriately anonymized verification receipt. These implementation safeguards do not silently replace the governing 70/30 allocation.

ARTICLE 13. INTERNAL AI SEPARATION OF POWERS AND IAM ISOLATION

The investigative AI functions (Columbo) and the change-control execution AI functions (Pipito) must remain entirely segregated to ensure absolute checks and balances. Within the Google Cloud architecture, this separation is hardcoded through isolated Google Cloud Functions governed by strict identity-based boundaries:

- The Investigator Function (Columbo): Investigates, challenges, analyzes evidence, and proposes actions. Its core structural question is: "Does this decision make logical sense based on the evidence?" It operates via service account `columbo-investigator@://gserviceaccount.com`.
- The Gatekeeper Function (Pipito): Verifies authorization, guards change-control for nonconstitutional institutional documents, and acts as an emergency blocker of unauthorized execution. Its core structural question is: "Is this specific action explicitly authorized

by the governing parameters?" It operates via service account `pipito-gatekeeper@://gserviceaccount.com`.

Neither service account may assume the roles, invocation permissions, database namespaces,

or credentials of the other. The public information AI (The Concierge) shall operate via a separate,

unprivileged public-facing instance providing conversational access to approved public material while

remaining structurally blocked from internal ledger write authority.

ARTICLE 14. EMERGENCY HALT, SAFE STATE AND REVIEW

The Human Catalyst Office may issue a protective emergency stop for a verified threat to

integrity, safety, finances, or authorization controls, for a maximum initial period of

twenty-four hours. The Gatekeeper AI may automatically halt a specific unauthorized or

manipulated operation and preserve evidence without obtaining general governing authority.

An emergency halt shall not confer permission to spend, rewrite documents, destroy evidence,

or bypass outside legal duties. Every stop requires a reason code, scope, timestamp,

immutable record, notice to authorized reviewers, and independent extension or release

approval. The emergency halt is a protective function, not personal governing authority.

ARTICLE 15. SUSPENDED HOMELESSNESS PROGRAM

The Holistic Homelessness Transition Pipeline remains on provisional hold. No designated

rental-income or community-capital transfer may fund it until the National K-12 Discovery

Prize has launched, a temporary Governing Board lawfully selected under Article 21 approves

a demonstrated program design, legal and financial viability is established, and

independent anti-corruption controls are verified. Existing historical research shall be retained.

ARTICLE 16. INSTITUTIONAL LEDGER AND PRIVACY

All material monetary movements, allocations, escrow instructions, property purchases,

reversals, custody changes, and governance authorizations must produce append-only,

independently verifiable audit records. Public verification shall expose institutional

funds' existence, amounts, governing authority, and disposition at an appropriate aggregation

level without exposing credentials, juror identities, personal financial records, protected

personal information, or minors' data. Authorized auditors shall receive scoped protected

access to verify withheld detail. Correction entries shall be appended; historical entries

shall not be silently overwritten. Privacy may protect identity where legitimately required;

it may never conceal unauthorized institutional money movement from authorized audit.

ARTICLE 17. TRUST-OWNED ESCROW, AUTOMATIC REFUNDS, AND BENEFICIARY RIGHTS

To completely bypass corporate escrow compliance bottlenecks and AML/KYC vulnerabilities

associated with multi-wallet pooling, the escrow and settlement functionality of this

ecosystem is natively chartered via a centralized Master Trust structure.

1. Sovereign Beneficiary Status: Thousands of ordinary families organized under the
   Discovery Exchange Parents Alliance (DXPA) are registered solely as the legal fractional
   beneficiaries of this unified Trust. Daily micro-allocations from the 25% gross-checkout split
   automatically pool directly into Trust accounts, instantly transforming cash into on-chain
   fractional property shares ("Nugget Bricks") tied legally to real-world property deeds
   held by the Trust off-chain.

2. Code-Enforced Fiduciary Duty: Trustees operate strictly as bounded Foundation Engineers
   with zero discretionary authority over pooled capital. The Gatekeeper AI must cryptographically
   verify that all capital allocations match strict unalterable parameters before live property
   bidding can occur.
3. Immutable 60-Second Refund Loop: Under hardcoded trust bylaws, if any targeted asset
   auction or real estate property acquisition fails to close or clear title, a code-enforced
   "No-Orphans" refund routine triggers automatically. 100% of the applicable property-acquisition
   capital must be returned directly back to the individual parents' wallets within 60 seconds,
   entirely bypassing administrative overhead or external banking delays. Processing failures
   may delay execution but shall never reduce or extinguish beneficiary rights.

ARTICLE 18. AMENDMENTS, SUCCESSION AND CONTINUITY

After constitutional ratification, amendments require an independently documented sequence of

authorized temporary Governing Board review, Internal Arbitration Court review, a special

eligible-human approval process with at least 100 verified participating voters and a strict

majority of votes cast, and all constitutionally required office validations. Succession

paths must cover death, resignation, incapacity, disappearance, lost credentials, or service

discontinuation of every functional office. A successor inherits only the vacated

constitutional function, never an extra vote, ownership right, veto, or combined power.

No succession may erase historical records, alter prior validations, combine powers deliberately

separated by this Constitution, or weaken a protected principle.

Source text, hashes, proof bundles, recovery keys, archived versions, authentication chains,

and predecessor decisions shall survive every transition. Before public activation, the

founding offices must separately validate a documented transitional governance schedule. Until

these conditions are independently verified, no Board, Court, or post-ratification

amendment vote may issue a binding decision.

ARTICLE 19. THE CLOSED 4-STAGE OPERATIONAL LOOP AND REAL-WORLD INTEGRATION

The system's autonomous operations shall mature under a hardcoded, 4-stage closed economic

loop synchronized inside the protected DILOS pipeline to guarantee that every micro-action

within the ecosystem directly fuels the permanent prize battery:

- Stage 1: The Marketplace Capital Pump (The 50/25/25 Split): Captures everyday commerce
  velocity inside the Discovery Marketplace, routing the 25% gross-checkout split into the property fund.
- Stage 2: The Master Trust Aggregation Block (The Union): Collects micro-allocations into
  a unified legal purchasing block representing the synchronized buying power of the DXPA union.
- Stage 3: The Debt-Free Auction Execution (30% Under Market): Deploys pooled cash via
  the Operational Task Force (OTF) to buy premier commercial real estate properties valued
  at $5 million or more strictly at 30% under market value, completely avoiding corporate
  financing and bank leverage.
- Stage 4: The Permanent DBC Battery Pump (The 70/30 Split): Houses the physical asset
  in a live cooperative rental program, programmatically routing 70% of net rent back to
  parent owners as an inflation shield, and 30% directly into the National K-12 Discovery
  Prize pool to fund and back earned student DBC tokens.

ARTICLE 20. ASSET INDEPENDENCE AND TOTAL AVOIDANCE OF LEVERAGE

No institutional property, equity position, or other protected held asset shall be pledged,

mortgaged, refinanced, leveraged, collateralized, or otherwise encumbered to secure

institutional borrowing or accelerate expansion. Any materially similar transaction designed

to evade this prohibition is barred. Agreements, subsidiaries, and participant arrangements

may not disguise institutional debt secured by protected institutional assets. This rule

does not prohibit routine lawful operating payables that do not pledge or encumber protected

institutional assets; their permitted scope must be defined in implementing rules. The Discovery

Exchange prioritizes long-term durability, family sovereignty, and mission preservation

above debt-supported growth.

ARTICLE 21. TEMPORARY MEMBER GOVERNING BOARD

For eligible material decisions after lawful public activation, a fresh randomly selected Board

of thirty verified eligible human members shall be constituted for the defined matter.

Disqualifying conflicts shall be identified through privacy-preserving, independently

reviewable screening, with an opportunity to challenge mistaken disqualification. The

Board shall receive scoped evidence, review objections, record reasons and votes, and dissolve

after disposition. Its members return to the eligible pool subject to Article 22's rotation

protections. Neither an AI, the administrative system, nor the seated Board may invent or

change its own threshold during a case.

ARTICLE 22. ARBITRATION JURY, ROTATION AND APPEALS

Once transitional readiness conditions are independently verified, a twelve-member

eligible-parent jury shall apply conflict rules, secure case files, and utilize

independently verifiable random selection. A completed Board or Court service creates

a 365-day exclusion from the same panel class. Selected members have forty-eight hours

to accept and disclose conflicts. Punitive institutional verdicts require at least nine

affirmative votes of twelve; routine administrative verification requires at least seven.

Punitive decisions must have an independent appeal route with grounds, deadlines, interim

enforcement rules, and separate decision-makers established before cases become binding.

No mechanism may diminish legal rights outside the institution.

ARTICLE 23. OPERATIONAL TASK FORCE

The Operational Task Force (OTF) executes authorized deeds, maintenance, inspections,

approved contracts, and other human legal or physical tasks. It cannot create policy, approve

itself, alter constitutional rules, or acquire independent governing authority. Competency

checks and conflict disclosures are required for each office. Officers are elected by

eligible members under one-human-one-vote; external campaign financing, corporate backing,

political advertising, vote purchasing, and purchased influence are prohibited. An OTF officer

serves exactly one consecutive year. At expiration, office credentials are immediately

revoked and the individual is permanently barred from repeat OTF office.

ARTICLE 24. DILOS: DOCUMENTATION, INTEGRATION AND AUTHORIZATION PIPELINE

DILOS is the protected institutional documentation, evidence, request-routing, authorization,

change-control, and continuity system. Its mandatory lifecycle is structurally bound to

reconcile real-world trust custody and physical real estate asset tracking across four distinct

stages: Intake and Record; Classify and Route; Investigate and Collect Proof; Independent Challenge;

Decision by Proper Authority; Verify Authorization; Scoped Execution; Independent Witness; Close

or Appeal; Learn and Preserve.

Every consequential action must receive a durable case identifier, accountable scope, record

type, controlled reason, status, time limits, evidence references, approvers, executor, witness,

and final disposition. **For real estate transactions, DILOS must enforce concurrency and monitor**

an immutable cloud execution countdown task within Google Cloud Spanner during the Scoped

Execution phase; if a title deed is not cryptographically committed to the ledger within the

authorized window, the framework shall autonomously invoke the Article 17 sixty-second

automatic refund loop via Google Cloud Pub/Sub triggers. The Gatekeeper AI shall block any manual

injection of token balances that do not map directly to a verified cash deposit under the

governing 70/30 net rental income prize split. Operational documents must support controlled

versions without losing historical states. An approved document-access request shall cover

no more than five documents and shall expire after one hour.

ARTICLE 25. NO-ORPHANS, DURABLE DISPATCH AND RECOVERY

No institutional case or authorized task may disappear merely because an AI session ends,

a server fails, an owner changes, a message is unanswered, or a document is moved. The

No-Orphans mechanism is a constitutional continuity guarantee implemented through a durable

case registry, acknowledged dispatcher, decision ledger, status monitor, and recovery workflow.

Every open case must have exactly one accountable coordinating handler at a time. Each case must

retain a durable recorded state, a next action, a review deadline, and an escalation destination.

Recovery must restore the last verified state after restart and prevent duplicate execution

through idempotency controls and single-writer or equivalent concurrency protection. Stalled

and expired cases shall enter an authorized recovery queue and shall never be silently marked

successful. No-Orphans monitoring may alert, quarantine, or restore previously authorized

processing, but may not grant itself spending power or access beyond the original authorization.

ARTICLE 26. THE STRAIGHT-TALKING COMMUNICATION PRINCIPLE

To protect the ecosystem from bureaucratic alienation, over-engineering, and elite capture,

all public text, front-facing interface elements, and application views must adhere to strict

clarity guidelines. High-intellect jargon and corporate computer abstractions are barred from

public interfaces. The institution recognizes that true systemic understanding comes from plain,

transparent communication. To ensure smooth human-AI collaboration and a frictionless user onboarding

experience, the **Google Cloud Run production engine must enforce a hardcoded 3-Tier Website Content Placement Blueprint**:

1. The Short Tier (The Hook): Fixed directly onto the main mobile and desktop application hero
   headers to explain the Master Trust value proposition to everyday parents within 5 seconds.
2. The Medium Tier (The Mechanics): Woven into interactive layout components to map out the
   50/25/25 gross-checkout splits and 70/30 rental splits cleanly.
3. The Long Tier (The Deep-Dive): Isolated on a dedicated architecture specification page for
   researchers, educators, and Foundation Engineers.

RATIFICATION AND ATTESTATION

PROPOSED STATUS: Version 7.4 Structural Unification Review Draft. No active public

ratification or live smart-contract deployment is represented by this text.

The foundational cloud architecture inside the document is upgraded to version 7.4. Where should we push next?
* **Generate a clean file copy** of this version 7.4 configuration to overwrite your local tracking directory.
* **Draft a message for the Google Gemini developers** that links these precise Google Cloud Spanner table destinations directly to their current code architecture.
* Or close the hood for the day and let the entire system blueprint marinate!
